I am not surprised by the tactics of the enemy, this is an established pattern by those in warfare.

The reputation of the scientists who put their careers on the line, are clearly unassailable and would likely raise suspicion among those who respect them.

These scientists are not afraid and applaud them for their integrity. The threat of harassment in power has not deterred them.

Let us pray for their safety, and their loved ones.

And, above all, fellow Americans....be prudent, get a VPN while you can.

People that took this toxin deserve medical compensation by the US government since it promoted and distributed this toxin.

 LIKE (9)  REPLY (2)

Soujourner  Jana's Substack Jan 4

Why would the American taxpayer (the source of funds for the US government) com those who were harmed? Not a single dollar from citizens should be used.

Those personally responsible for the decisions to do harm should be held liable, thei and their freedom should be taken from them.

 LIKE (8)  REPLY (2)

Lisa@eatrealfood  Lisa@eatrealfood Jan 4

My understanding is that the us department of defense was involved in all the manufacturing of this product just like the anthrax vaccines, etc.

 LIKED (4)  REPLY (1)

Soujourner  Jana's Substack Jan 4

 Liked by Anandamide

That is also my understanding. DARPA, specifically, which is, as you point out, an agency of the DOD of the US govt. Those people involved in the decisions : were funded from their personal resources.

DARPA is responsible for the main 'grant' funding of MRNA, the publicly traded company where the CEO (Bancel) worked at the French company, bioMerieux. bioMerieux CEO. bioMerieux was responsible for building the Wuhan lab.

This is all public information.

My point is this: the US taxpayers paid for the development of the sinister virus developed by scientists along with shareholders and other stakeholders. The crimes that each individual decided to participate in....they....not me, you or fellow citizens should pay for the fallout.

I urge you to look at the root cause of the American mindset of 'someone has to be responsible'. Those responsible for the crime should do the time. That, imho, would be justice. Godspeed.

Compliancy should carry a price. the Russian and Chinese injections are a toxicity. Idk how they are handling injured people. Many countries follow due to trust. In the western world seems like Morality and laws have been bypassed for an unseen agenda. broad scale liability shields are unlawful new way to achieve massive return on investment.

 LIKED (1)  REPLY

Vivien C Buckley  Vivien C Buckley Jan 6

I totally agree. I'm Canadian and pfizer injured. Tax payers should not be financially responsible for this detrimental oversight.

 LIKED (2)  REPLY (1)

Soujourner Jana's Substack Jan 6

I am so sorry that you were injured. I also believe that compassion for those whether coerced or not, is needed.

Many people in my own life have been injured, and right now we are caring for children's dad. Aggressive stage 4 lung and liver cancer. He took the shots he was told it would work and he wouldn't get/give covid to the senior citizens delivered meals to.

LIKE REPLY (1)

Vivien C Buckley Vivien C Buckley Jan 6

So many injuries going unnoticed. Every doctor I've seen has others in practice who are injured. The injuries are not rare just ignored and silent is truly a nightmare. We have no proof as no diagnostic test exists but he died in 2022, he did have Parkinson's and his wife, my sister in law died in June of kidney failure. A neighbour is on kidney dialysis supposed to get a transplant this month, her husband is the donor the prerequisite is they have to take a covid shot. God help us. I'm sorry for what you are going through.

A blatant and ham-handed attempt to disappear or delay vital evidence and information about covid jabs is a story that should be shared.

Non-techies, please hoard anything as a pdf, offline whenever your gut tells you that a story is going to disappear. External solid state drives are pretty cheap now.

If info disappears from the net it can be resurrected from somewhere and republished.

I saw that too and I am wondering what causes the amyloid to increase from Spike protein. How does the amyloid relate to fibrin and/or the blood clots. Here's a link to YouTube where it shows the procedure being experimented with in Japan with some success:

<https://www.youtube.com/live/C8JUuh4gsS0?si=YYGmTLUE7ttkXjL8&t=2711>

 LIKE  REPLY (3)

BadProtein BadProtein Jan 5

Hi StayCreative,

I just speculatively googled 'spike protein prion' in 2021 when I was looking for reasons not to take the vaccines. I wasn't going to anyway since I could instantly detect the truth about the situation in early 2020, and I always thought fools went for any kind of injection. Every move made by the WHO was counterintuitive - and it set the stage for the rest of the entire (ongoing) mindfuck.

The very first search result that came up was an in-silico computer model that showed how different amyloid proteins stuck to various parts of the spike protein.

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7988450/>

Check out the images - it is just about puzzle pieces fitting, and how strong the is. This paper explores heparin binding to spike in terms of neurological issues.

Fibrin seems to have risen as the culprit of interest, if you find a paper on fibrin ( would love to see it - but I think the paper above is in the same ballpark. I think t could explain the sudden clots, as opposed to the slow burn of prion disease.

I have no data on the composition of the clots in vivo. Not an expert!

Read the paper while thinking of this:

>>>> AI :

### Indications for Heparin Use

Heparin is an anticoagulant medication widely used in various clinical situations and treat thromboembolic disorders. Here are the key indications:

#### 1. Prevention of Venous Thromboembolism (VTE)

Post-operative patients: Especially after major surgeries (e.g., orthopedic, abdo

Immobilized patients: Those who are bedridden or have limited mobility.

#### 2. Treatment of Deep Vein Thrombosis (DVT) and Pulmonary Embolism (PE)

Heparin is often the initial treatment for DVT and PE, particularly in the acute ph

#### 3. Acute Coronary Syndromes (ACS)

Used during hospital admission for patients with unstable angina and myocardia infarction.

#### 4. Anticoagulation in Patients Receiving Dialysis

Heparin is commonly used to prevent clotting during hemodialysis procedures.

#### 5. Atrial Fibrillation

For patients with atrial fibrillation at risk of thrombus formation, particularly befc cardioversion.

#### 6. Other Specific Situations

Used in cases of certain thrombotic disorders, such as disseminated intravascu coagulation (DIC).

During various surgical procedures where anticoagulation is necessary.

Happy New Year! Check out my substack. Subscribe and the page will get sent

email to forward to your friends for spirited discussion.

Cheers!

Soujourner  Jana's Substack Jan 4

AI is a tool of tyrannical control. The database is skewed and anything it is not programmed to regurgitate is 'propaganda'. It is not reliable and those who rely on it do so at their own risk. Note the operative word "rely".

IMHO, those who use it risk weakening their intellectual capacity to analyze and store information. Memory capacity has already declined and then add the dopamine hitting brains. I know people can't resist the 'easy solution', 'just this one time'....it's a trap for them. And those in power know it, they don't allow their children near it. Play with AI at your own risk. GIGO. Garbage in, Garbage out. This is an universal law.

We humans are not just problem solvers but we are created and creative beings, beings made and our ability to create, emote and fulfill desires, all that is unseen, is what makes us above all other created things.

AI is also an energy monster. So why play their game?

Recent example (last week):

We all have used calculators for decades, now I go to the bank and the teller can't exchange my \$20 notes for larger denominations without first entering the data in her computer. Confused, because it wasn't a 'perfect' result, she needed to call her supervisor over to assist. I watched, at first in amusement, but astounded by the lack of skills. Now this is a bank teller whose job is to count.

Let's discuss phone numbers. Without using your device, what's your mom's phone

 LIKE (4)  REPLY (1)

I am a big fan of competence, but AI is just a tool, like cars, that gets jobs done. I note that FOSS AI is in the wild and can run on private hardware we own and can provide unbiased training data to. You're absolutely correct that most people will do this, and will become dependent on centralized AI that will be used to harm them. To resist the strategy of withholding essential blessings of civilization that will be used to coerce people to comply by myself adopting means of producing the blessings of civilization, starting with good food, and continually increasing the breadth of such blessings I myself, or my community, produces so that I cannot be starved into submission.

The real problem isn't that we don't remember phone numbers anymore, but that we are dependent on surveillance and tracking devices we pay for to communicate with another. Reticulum and meshcore radios are devices we can personally create, and we can use to communicate without providing our overlords the endless flow of surveillance that our phones capture, and without enabling our communications to be censored. Given the blatant and ubiquitous surveillance we suffer, the censorship of existentially necessary factual information being committed, we really need to end our dependence on centralized AI and services we require that are used as weapons against us by malevolent persons and institutions.

AI isn't the problem. Dependence on our enemies for AI - and everything else - is.

I discovered yesterday a new archival website , ArchHive, that is hosted on the Hive blockc decentralized nodes make content essentially immune to DDOS attacks, censorship from source or jurisdiction, and are simply posted in plaintext served by multiple nodes in mult jurisdictions.

Here is more information about ArchHive:

<https://peakd.com/hive-181335/@theycallmedan/ostakbzx>

<https://github.com/Dhenz14/archive>

<https://dhenz14.github.io/archive/>

@theycallmedan appears to be the author, and the first link is a post announcing ArchHive anyone and everyone can read all about it, and can reach out to discuss it with him by coi on his post. You may first have to create a Hive account to post and comment on Hive.

Hope that helps. I very much appreciate you making this information publicly available, ar me to it.

Thanks!

"Money is the root of all evil."

No, it's not. It's just a tool, like guns or bulldozers. The love of money is the root of all because love is something that living beings share with each other. Misapplying that mere thing utterly deranges whom does it, replacing the healthy interpersonal affect underlies the strength and blessings of civil society with a malevolent greed that can every good person and relationship when it is powerful enough to kill everyone with : valuable psychopathic avarice desires so they can steal it from their cold dead finger words ascribed to Jesus were 'The love of money is the root of all evil.'

The timing of the cyberattack immediately following publication of Kuperwasser and El-D is striking. What makes these papers particularly significant is the population-level evidence from the Korean cohort study alongside mechanistic lab data on p53 suppression. The coordination between spike protein effects and existing oncogenic pathways like HPV E6 opens up questions that deserve serious investigation. Watching established researchers with solid h-indices silenced through infrastructure attacks rather than scientific rebuttal tells us a lot about where institutional comfort zones currently sit.

TRM Dead Pool Jan 3

Good question and I honestly don't know. We'll have to wait until someone more knowledgeable answers but for now I say "No" it would not. Here's my amateur hour

1) It goes in through the nose not injection.

2) It is all visible to your immune defense system. None hidden in lipid nanoparticles.

3) Even if it gets down into the lungs I doubt it can be integrated there.

4) The sheer quantity of spike protein exposure from the shots is vastly larger than the disease.

5) There are no E. coli DNA plasmids in the natural disease.

You should ask AlterAI over at [alter.systems](https://alter.systems) and see what it says. Formulate the question and let us know the results. It's a very good medical AI.

The feral virus was not augmented by being within LNPs that separately produced harm. It was demonstrated to preferentially migrate to the ovaries by Pfizer in 2012. The virus was not accompanied by the plasmid DNA fragments that are the primary resources genetically integrated. The virus therefore was orders of magnitude less harmful than the jabs. IM Denis Rancourt's analyses, along with many others, demonstrate this. Here are selected Rancourt published in 2025:

I was intrigued by the attempted censorship of ACIP committee members and thought to the CV's of Kuperwasser and El-Deiry. At first Brave AI said they weren't ACIP committee but had contributed presentations for their consideration. Looking at the CDC site itself a <https://www.cdc.gov/acip/membership/index.html> showed it did not list them as members about to point this out to you but got distracted by a squirrel with something shiny. When recovered I remembered what I had been doing yesterday, and lo and behold, now Brave them both as ACIP committee members.

The CDC still does not list either of them at this time as ACIP committee members at the provided above. I find this suggestive of a subtle campaign to undermine factual reporting, countering disinformation promulgated by official sources, through failing to report the equal qualifications of both Kuperwasser and El-Deiry. While it's possible Brave AI and the CDC that incompetent, feigning helplessness to conceal Machiavellian manipulation is so com tactical that it is actually preposterous these professional institutions are actually incompetent accurately report the facts, just as I really can do laundry without permanently dying white and my wife really can change a flat. It's food for thought, and something that can be used by duplicitous actors to account, and better inform the public about the breadth of propagand narrative control mechanisms being used to disinform them.

The timing of these attacks basically telegraphs what everyone's been suspecting. When peer-reviewed research gets silenced through infrastructure sabotage instead of scientific that's a massive red flag about data integrity. The Arnold Foundation funding trail is especially interesting because it shows how coordinated the censorship apparatus has become across supposedly independent watchdog groups. I remember when PubPeer seemed like a useful spotting actual fraud, now it feels more like a weapon for suppressing inconvenient findings. The fact that Kuperwasser and El-Deiry are established researchers with solid credentials makes the desperation here even more obvious.

PubSmear will mix in papers that are overt cases of fraud so they can point out a few trophies.

In fact I think they coordinate with some clowns like Dr. Fleming who post false flag p easy for them

Sweep in , denounce , then integrity party once complete.

DDOS attack. But of course. Check out Clifford Carnicom's list of Defense Contractors th accessed his servers when he published Aerosol Crimes in 2005. Catherine Austin Fitts s the only way out is to stop the government funding for these agencies and initiatives, eve human rights violations mount.
